Static Files

- [Using Static Middleware](#)
- [Using `Echo#Static\(\)`](#)
- [Using `Echo#File\(\)`](#)

Images, JavaScript, CSS, PDF, Fonts and so on...

[Using Static Middleware](#)

Using `Echo#Static()`

`Echo#Static(prefix, root string)` registers a new route with path prefix to serve static files from the provided root directory.

Usage 1

```
e := echo.New()
e.Static("/static", "assets")
```

Example above will serve any file from the assets directory for path `/static/*`. For example, a request to `/static/js/main.js` will fetch and serve `assets/js/main.js` file.

Usage 2

```
e := echo.New()
e.Static("/", "assets")
```

Example above will serve any file from the assets directory for path `/*`. For example, a request to `/js/main.js` will fetch and serve `assets/js/main.js` file.

Using `Echo#File()`

`Echo#File(path, file string)` registers a new route with path to serve a static file.

Usage 1
